Reflection Questions & Answers

1. Did your estimations reflect the actual effort?

Yes. The story point estimates generally reflected the actual effort required. The Sprint 3 work items were estimated at **21 story points in total**, and all four items were completed during the sprint. This suggests that the estimates were reasonably aligned with the actual workload.

2. Was your backlog well-prioritized?

Yes. The backlog was prioritized appropriately, with the more important API-related user stories given higher priority. The work was organized around the main project requirements, allowing the team to complete the planned items effectively.

3. How did your simulated sprint align with your plan?

The simulated sprint aligned well with the plan. The planned Sprint 3 work consisted of four user stories, and all four were completed. The sprint therefore achieved its planned objectives and finished with **0 story points remaining**.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that the team was able to complete the

planned workload within the sprint. The work decreased from approximately **21 story points to 0**, indicating that the team had sufficient capacity to complete the sprint commitments. It also showed that the planned workload was achievable within the sprint timeframe.
